

Quassel IRC - Bug #1086

tooltip and explicit /whois can show different realname (caching issue?)

07/05/2011 09:24 AM - DeepDiver

Status:	New	Start date:	07/05/2011
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Quassel GUI (Qt)	Estimated time:	0.00 hour
Target version:		OS:	Linux
Version:	0.6.2		

Description

Reported by a debian user via Debian BTS:

<http://bugs.debian.org/cgi-bin/bugreport.cgi?bug=632705>

```
Package: quassel  
Version: 0.6.3-2  
Severity: normal
```

<http://lindi.iki.fi/lindi/quassel/realname-not-shown1.ogv>

```
shows how I did not see the realname of "formorer" on #debian-devel  
today. If I explicitly right-click the nick and choose "Whois" then  
the tooltip shows the correct realname.
```

This sounds like a caching issue somewhere. Maybe due to netsplits?

In case this is already fixed in a newer version please guide me to the related commit though I can patch 0.6.3

Thanks a lot,

Thomas
