OS: Mac OS X	
Description Hey ho, it would be great if I'd be able to use QuasselIRC with the native full screen mode of OsX called presentation mode. I am not sure if this is the right name, but I am talking about the right edge of the window where you're able to get a new virtual desktop just for the current application. Is it possible to add this feature? Have a nice day together and thanks for your great work, Bastian
