Hmm, is this reliably reproducible, and if so how?

I don't have a machine that can properly suspend/resume currently, but may find one elsewhere if the bug can be reproduced. Looking at the backtrace I don't see what could be wrong; this `qobject_cast()` should never crash. So I want to rule out that it was a fluke first.

### #2 - 03/02/2014 02:56 AM - kitterma

No, it's not reliably reproducible.
