Target version:				
Version:	0.10.0		**OS:**	Windows

Description

Renaming a query buffer to contain a newline in the name can lead to a crash.

How to reproduce:
1. Rename a query buffer into a name that contains a newline (for example, using copy-paste of a multiline string)
2. Hover over buffername.

What should happen:
Tooltip is displayed normally

What does happen:
Client crashes.

Revision ecf1ab29 - 02/08/2016 09:29 PM - Manuel Nickschas

Don't allow newlines in buffer names

Since it is possible to enter newlines when renaming a buffer via
the GUI, we need to have a sanity check that cuts off the additional
lines.

Fixes #1389.
