Target version:		OS:	Linux
Version:	0.11-pre		
Description			
Hi,			
I've had Quassel (running with the quasselcore-0.12.2) set up for a while, but have recently tried connecting to an SSL-only IRC server. When I try to connect, the client shows:			
[10:04:44] * Connection failure: Error creating SSL context ()			
[10:04:44] * Connection failure: Unable to init SSL Context:			
And the log from the server reads			
2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function SSLv23_client_method			
2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function SSL_CTX_new			
2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function SSL_library_init			
2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function ERR_get_error			
I have openssl and openssl-devel installed:			
1. rpm -qa grep openssl			
openssl-1.0.1e-42.el6_7.4.x86_64			
openssl-devel-1.0.1e-42.el6_7.4.x86_64			
Let me know if there's more info I can provide
