

Quassel IRC - Feature #1453

Improve chat list & handling of query windows

01/05/2018 05:02 AM - zauberfisch

Description

I have hundreds of query windows, so I setup a chat list to only show queries that have a new message. Once I click on them, I can reply. But then the state is "no new message" and it disappears from my chat list.

Finding this specific query again is extremely tedious.
(Searching by buffer name is not helping either as I don't always remember the name)

This ticket is just to outline my underlying issue, and perhaps to discuss non-issue-specific ideas regarding this topic.

I have created 1 bug and 2 feature suggestions to solve my problem:

- [#1450](#)
- [#1451](#)
- [#1452](#)

I am unfortunately not in a position to contribute code, but would like to offer a small bounty of EUR 100 for completing the above 3 issues or coming up with and implementing an alternative solution that solves my problems (within the next 6 month).
