

Quassel IRC - Bug #1493

SASL authentication does not work with characters of the extended set

09/11/2018 04:59 PM - Hofaetho

Status:	New	Start date:	09/11/2018
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		OS:	Any
Version:	0.12.4		
Description			
SASL authentication does not work with some characters which are not in the 7 bit character set.			
For example, the $\frac{1}{2}$ character causes an CAP: SASL authentication failed error.			
This is in version 0.12.5 -- which the report form does not permit me to specify.
