

Quassel IRC - Feature #1499

stop marking channel read when user is idle

Description

I often leave the quassel client running on multiple computers in the house connected to my core.

So when a client I left on another computer is open to my favorite channel, that channel is always the all messages read color, and I miss messages on it because I forget about this.

So a feature I would like very much is, if you leave a quassel client open but then go idle, as in don't do anything on the computer, for it to stop marking the current channel as read in the core.

History
