### Multiple autoWHO requests lead to unhidden RPL\_WHO spam

<b>Target version:</b>	0.2.0-beta1	<b>OS:</b>	Any

<b>Description</b>			
sendAutoWho right now sets a flag that's cleared on receipt of RPL_ENDOFWHO. If another autoWHO is sent before RPL_ENDOFWHO from the first is received, the second set of replies is not hidden.			
Instead of using QSet, we should keep track on the number of requests by using a hash of ints.
