<b>OS:</b>	Any		
<b>Description</b>			
A special view for the buffer view, which is similar to tabs.			

#### History

##### #1 - 12/20/2007 02:41 PM - EgS

I've already had the same Idea.

I think it would be great to have a bar of preferred channels under/over (or wherever located) the bufferwidget.

I think this would be a great place to use as a playground for a QGraphicsView :) fancy effects and stuff :)

If someone can provide me with a usable (and usability-compliant ;-)) way to select/choose/change/manage those tabs, I am not opposed and might have a look at some point. Right now, I can't imagine how to combine this with BufferViews without making things really complex.

Replacing BufferView by a tabbar is out of the question, since this solution does not scale. So I imagine more like a bookmark/favorites thing here...
