Quassel IRC - Feature #652

Move auto-identify before reconnect

03/31/2009 10:17 PM - yofel

Description

I'm havin an annoying problem with the auto-identify behaviour here. When my connection gets resetted the core reconnects to all channels what takes more than 1 minute here. But some nickservs don't wait more then a minute for the identify command and change my nick to Guestxxxx. Can the identify commands please be sent before rejoining the channels?

I'm having a similar issue: when connecting to Freenode, Quassel joins the channels before I'm identified; so my IRC cloak isn't activated yet and my IP address etc is seen by others.

- Status changed from New to Confirmed

Well, the actual problem is that NickServ's reply arrives too late. There is no portable way to avoid this currently (as the various nick services are network-dependent, we don't feel like hardcoding a wait for a certain reply etc). Maybe I find a nice way to allow a configurable delay though.

For the time being, Freenode supports setting your nickserv password as server password, in which case you'll be already identified when you go online. That's at least a workaround for now.

Ok, thanks; the workaround works.
