

Quassel IRC - Bug #654

Using multiple Quassel clients simultaneously

Version: 0.4.0	
Description I use two Quassel clients at the same time, and I have noticed some problems doing so. Having focus on a buffer causes it be constantly marked as read, on both clients, this is fine, except, even if a client is minimized or hidden, it still marks it as being read. This means that a client that is hidden will prevent it's currently selected buffer from having it's unread status being updated on the other client. Another problem is with the notifications, if someone says my nick a notification will appear, responding to this on either client should hide the notifications on both, however it does not. Just some small usability issues that I would like to see fixed.
