

Quassel IRC - Bug #677

MainWindow doesn't restore to maximized state after application is restarted

04/16/2009 01:47 PM - Squider

Status:	Resolved	Start date:	04/16/2009
Priority:	Normal	Due date:	04/16/2009
Assignee:	Sputnick	% Done:	100%
Category:	Quassel GUI (Qt)	Estimated time:	0.50 hour
Target version:	0.4.2		
Version:	0.4.1	OS:	Any
Description			
When starting the application, the main window doesn't restore to the correct state. After the patch, the maximized window size shouldn't affect the window size stored and the maximized state should be recovered properly.

Revision 65e81b756816cc4ac0eeb4628552ccfd8a3b1ac3 - 05/13/2009 11:16 PM - Manuel Nickschas

Properly save and restore the mainwindow state

We now save size, position, maximize, minimize and hidden-to-tray on exit and restore it at next start. Since Qt's restoreState() has some issues, I had to workaround things a bit, so please test on your system and report if there are still problems with the current implementation!

Fixes #677, fixes #452 (since the state is remembered, so just quit Quassel using the tray context menu while it's hidden).

#2 - 05/13/2009 11:32 PM - Sputnik

- Assignee set to *Sputnick*

Cleaned up the mess that existed in MainWin and did it properly. Also I'm using `restoreState()` now, which **should** take care of ensuring that the window appears in the visible screen area.

Please let me know if there are still issues; window manager-related stuff like this (in particular if it involves some hackery) is hard to get right on all platforms :)
