

Quassel IRC - Bug #684

Keine Tastatureingabe möglich

04/28/2009 06:16 PM - Naraku

Status:	Closed	Start date:	04/28/2009
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Quassel GUI (Qt)	Estimated time:	0.00 hour
Target version:		OS:	Linux
Version:	0.4.1		
Description			
Quassel nimmt keinerlei Tastaturangeben entgegen, weder im Chatfenster noch bei den Einstellungen. Alle Mausfunktionen funktionieren weiterhin problemlos.

Alle Mausfunktionen funktionieren weiterhin problemlos.

"No keyboard input possible"

I have the same issue with git versions on Ubuntu Jaunty x64. The quick workaround is to change focus away from and back to quasselclient.

- Target version deleted (0.4.1)

Can't reproduce. Most likely not a Quassel issue... does it happen with other apps as well?

#3 - 05/26/2009 12:02 PM - Naraku

No, it happens only with Quassel.

I tried it with 0.4.1 from the fedora repos and i compiled from source ... the bug was the same.

The workaround of Daisuke doesn't work at all on my system.

#4 - 05/26/2009 12:23 PM - Naraku

Found out the following:

I have "Sprechblasen anzeigen" (Show Baloons oder something like that) turned on.

So when i connect i get a speech bubble that says my nick is registered. When I click into the bubble i can write in Quassel until i leave focus of the chat window e.g. when i open settings.

When i uncheck "show bubbles" or ignore the bubble, i am not able to write one letter.
