<b>Target version:</b>			
<b>OS:</b>	Any		

#### Description

As Quassel is a distributed client, I think it would be very interesting if it supported the SILC protocol. As explained here [ <http://silcnet.org/general/> ], "SILC Project develops the Secure Internet Live Conferencing protocol, which provides secure conferencing services".

Also, the fact that Quassel is multi-platform would make SILC widely available. Hopefully that could show its potential.

P.S.: For the moment, the only graphical client which supports SILC is Pidgin. It works very good. However, since I use Quassel as my main client, I would quite like it to support SILC.
