Quassel IRC - Feature #904

User mode commands can be more concise

01/26/2010 08:34 AM - srae

Description

If multiple users are selected for a mode change, the commands should be concatenated for brevity's sake, since issuing individual mode commands for each selected user can sometimes be a very lengthy task.

The RPL_ISUPPORT header sent by the server defines MODES=x, where x is the number of mode changes allowed per line. Mode commands can be stacked up to that limit either as

```
/mode #channel +o user1 +v user2 -h user3 [...]
```

or

```
/mode #channel +ov-h user1 user2 user3
```

A quick glance at SearchIRC's biggest servers list indicates most networks support at least 6, although a few (freenode, efnet, abjects) don't list a MODES= value.
