

Quassel IRC - Bug #956

Quasselclient segfaults on maemo 5

04/28/2010 04:44 AM - public

Status:	Rejected	Start date:	04/28/2010
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Quassel Client	Estimated time:	0.00 hour
Target version:		OS:	Linux
Version:	0.6-pre		
Description			
Quasselclient segfaults on maemo 5 when clicking on "add" in the first-run core configuration window. it works fine" when i copy the config from an existing quasselclient from my linux pc and then only segfaults when i try to open the config window			
(compiled from git and snapshot of current (apr. 26 2010) release)			

History

#1 - 04/28/2010 05:12 AM - EgS

- Status changed from New to Rejected

At the time being we do not officially support the maemo 5 platform (yet). Thus we have no means to reproduce this bug.

Without a backtrace there's nothing we can do to fix this issue. Judging by the description it doesn't seem to be a Quassel bug anyways.

Feel free to reopen the bug if you have a proper backtrace.
